

DMK Alkaline Wash

The DMK Alkaline Wash system is a remarkable treatment for all areas of the face and body, designed to reduce fine, downy hair. This type of hair is very difficult to remove with other methods as the growth is usually dense and would take a long time to treat with electrolysis. It is also not suitable to be treated with IPL or Laser because it has no colour for the laser to target. Alkaline Wash can remove large areas of hair in one treatment without discomfort, in comparison to other hair-removal systems. It also works well when combined with electrolysis and laser, which are suitable for terminal hairs. After your first treatment, the hair will grow back at its normal rate, but as treatments progress the hair regrowth rate will become slower and the hair will weaken; usually resulting in a permanent loss over a period of time.

ALKALINE WASH

It is also great at helping to resolve other skin conditions, such as acne, rosacea and hyper pigmentation. The possibilities are endless for this amazing and unique skin revision method. DMK Alkaline Wash can be used anywhere on the face or body and is suitable for males and females of any age or skin type. ALKALINE WASH is available only as a professional in-clinic treatment in the hands of a highly skilled therapist who has received DMK training and the necessary experience.

DMK Alkaline Wash system is a unique formula that takes the pH of the skin to the opposite end of the pH Scale. Alkaline Wash has the ability to turn the pH of the skin from 5.6 to a pH of 12 in under three minutes. This action completely softens or desquamates the skin cells. This dissolving action also helps to treat scar tissue, razor bumps, acne skin resurfacing and stretch marks. Alkaline swells, softens and dissolves skin cells whereas an acid hardens them. This method is also effective for the treatment of dark spot pigmentation problems. By alkalizing the spot first, it allows the DMK melanin inhibitors and skin lightening products to work much faster than any other method using acids. Alkaline Wash is a highly effective and versatile skin revision method that delivers radical results in a very short time. Many users have found Alkaline Wash to be a superior tool when treating difficult skin conditions.

DMK Seba-e

DMK Herb & Mineral Spray

Price £26

FAQs

Why do I need a patch test

The patch test is usually carried out on the area to be treated and ensures that your skin is suitable for the alkaline treatment.

How often should I have treatments

Initially, we recommend you have a treatment quite frequently, between 2-4 weeks. As you progress throughout your treatments, and your hair growth reduces, you will need a treatment between 4-8 weeks. Your practitioner will advise you how frequently you will need to have a treatment.

Can I have this treatment if I have acne or am sensitive

Alkaline wash is perfect for removing fine, fluffy hair but also acts as a resurfacing tool. The solution sits on the skin and dissolves the hair gently, without causing any pain or irritation to the skin. It can also gently exfoliate any dead skin sitting on the surface which helps with breakouts.

Is it permanent

Over a period of time Alkaline wash will reduce the hair growth enough to what will become a permanent solution. These results are progressive as we need to target the hairs during every phase of the growth cycle. However, your practitioner will be unable to guarantee how many treatments are needed or necessary, as permanent removal is dependent on many factors i.e. how the hair was previously treated, how long it has been there, the reasons for the hair growth etc. Some clients report a reduction in hair growth after just one treatment; however there's no guarantee as every client's skin is different..

Will it stimulate hair growth

Unlike waxing and shaving, Alkaline wash will not stimulate the growth of new hairs. After your first treatment, the hair will grow back at a normal rate but after further treatments the growth rate is dramatically wakens and slows down.

Can I wear makeup after

We always advise our clients to use mineral makeup when undertaking any skin treatments. If you use cosmetic makeup, we advise you wait 48 hours before re applying.

Is there any downtime

There is minimal downtime with the Alkaline Face Wash. Your skin may appear slightly red and warm post treatment, which will subside in a short period of time. We strongly advise you follow the aftercare procedure given to you by your practitioner.

Which areas of my face can be treated

Any areas of the face and the body can be treated provided the hair type is suitable.

ALKALINE WASH

Recommended Products

To achieve the desired results, Alkaline Wash is used in conjunction with a variety of other DMK Professional Products and a course of DMK Home Prescriptives.

Dmk Herb & Mineral Spray

DMK Seba-E

DMK Contraderm
