

DMK Skin Revision

DMK believes in Natural, Non-Invasive and Pain Free solutions to skin conditions and age management. Their success within the professional skincare industry was built on their results orientated approach to skincare. DMK formulations are botanical based & pharmaceutical grade because this ensures that their product contains enough of an ingredient to experience significant visible results. Pharmaceutical grade means it has a high concentration of active ingredients. They are therefore able to instigate real and lasting changes within the skin. Great skin doesn't happen with one product or one treatment but if your consistent with your routine and realistic about your expectations DMK can really make a difference.

DMK believes that any skin condition is a result of disharmony in the function of skin. Using the principles of biochemistry, DMK has formulated a range of treatments and products that re-educate skin. By matching formulations with the body's chemistry, the skin is induced to respond in a positive manner. The DMK concept is REMOVE, REBUILD, PROTECT and MAINTAIN. It is simply about restoring balance and enhancing skin to function optimally once more.

The DMK Concept

REMOVE:

Seen under a microscope, a cross section of skin appears as a series of constantly changing hills and valleys, with old cells sloughing off as new cells emerge. The DMK methods of removal orchestrate chemical actions in the skin which not only eliminate dead cells, but helps strengthen the living cells through our unique process globally known as The DMK Plasmatic Effect. Which flushes out the capillaries and delivers true oxygen therapy.

REBUILD:

Strengthens and extends the skin cell life by using ingredients that the body recognises and then talks directly to the skin cells via the slow release of ingredients into the skin where they can be stored for 8 hours

PROTECT:

Protect the skin from increasing danger posed by the environmental assaults of pollution and ultraviolet radiation. Skin cells require a full complement of amino acids and other nutrients to stay alive as long as possible. This includes certain free radical scavenging vitamins and ionic transfer minerals. DMK treatments maximise the strength of the skin's immune system and minimise the invasion of free radicals or bacteria, enhancing the skin's immune system and accelerating healing.

MAINTAIN:

After a DMK Revision™ treatment the DMK Skincare™ Home Prescriptive products help maintain the results. DMK Skincare™ prescriptives are essential for achieving the desired results started in the professional treatments. DMK provides comprehensive training to help therapists prescribe formulas in the same manner a doctor would prescribe medication.

WHAT DOES ENZYME THERAPY TREAT?

Anyone and everyone will benefit from enzyme therapy. Treatments are especially good for healing skin conditions such as acne, eczema, psoriasis, rosacea, premature ageing, pigmentation and sun damaged skin.

WHAT CAN I EXPECT DURING THE TREATMENT?

DMK treatments are very different to traditional facials. It is solely designed to give you proven results and long term healthy, functioning skin. It is not designed for relaxation, however a lot of people find it very relaxing.

Please be aware that the treatment includes an enzyme mask which is left on for up to 30-45 minutes. The mask will feel tight as it dries & you will notice a pulsating sensation under the skin as your capillaries dilate to bring fresh nutrients and oxygen to your cells. This is called the plasmatic effect - true oxygen therapy from the inside out.

DMK's botanical-based paramedical products work on all skin types. Enzymes are nature's own biological catalysts, which hydrolyse dead skin cells.

DMK Skin products are transdermal. They use chemistry that the skin recognises, which allows them to penetrate into the deeper layers of the skin. Skin tightening and toning is noticeable after the very first treatment.

An in depth look into our world renowned signature treatment – DMK’s Enzyme Therapy. This animation will help you understand how the skin benefits from our Enzyme Masque #1, have a look at true oxygen therapy in full effect

FURTHER TREATMENT INFORMATION

ARE THERE SIDE EFFECTS?

Redness from the Plasmatic Effect can last around 20/30 minutes. Other side effects are rare but can include slight redness, irritation or mild itching, temporary hyper-pigmentation and swelling for up to 24 hours. Slight flaking, dryness and peeling may be present for up to 72 hours post treatment.

HOW MANY DO I NEED?

Results are noticeable from your first treatment, however a course of 3-8 sessions is recommended. Your first few treatments can be 2-4 weeks apart, then every 30 days until the skin is functioning well. Future follow up treatments can be carried out every 6-12 weeks depending on the individual. This should always be followed with continued use of the home care prescriptives to prolong results and maintain healthy skin. Using other brands may cause reactions and will mean your results may take longer.

PRE TREATMENT CARE

- Avoid drinking alcohol the night before and on the day of treatment
- Drink at least 1.5 litres of water the day before and on the day of the treatment. This will regulate body temperature.
- Do not exercise immediately before or after the treatment to keep the body cool.
- Inform your practitioner if you are taking any medication, vitamins or supplements.
- Do not expose your skin to UV rays at least one week before the treatment.
- Do not exfoliate (including acids) less than one week before the treatment.

POST TREATMENT CARE

- Keep the area dry and clean for the rest of the day, avoid touching the skin.
- Do not expose your skin to UV rays for 2 weeks after the treatment.

- Use a daily sun screen (zinc oxide or titanium dioxide) minimum factor 30.
- Do not wax/thread/pluck or use bleaching creams for 2 weeks after the treatment.
- Avoid perfumed products.
- Do not pick or scratch the area.
- Avoid very hot baths and showers, steam rooms and saunas for at least two weeks.
- Avoid swimming in chlorine for 1 week.
- Avoid exfoliating the skin for 1 week.
- Avoid rough sports for 3 days.
- Avoid make up for 24 hours unless prescribed otherwise by your practitioner.
- Stick to using products recommended by your practitioner.
